Tejaswa Rastogi

Blockchain Security Engineer

razzor@ciphershastra.com | linkedin.com/in/razzor
razzor.xyz | github.com/razzor-codes | Abu Dhabi, UAE

Dedicated and passionate Blockchain Security Engineer with a strong commitment to safeguarding digital assets and systems. Adept at identifying vulnerabilities and crafting robust security solutions. Loves creating CTF challenges to sharpen skills and foster a culture of cybersecurity awareness. Enthusiastic about the intricacies of cryptography and its application in blockchain security. Committed to advancing the field through continuous learning and innovative problem-solving. Builds security tooling for AI coding agents, including Warden, a policy engine that decides what agents like Claude Code may do, along with Claude Code plugins and security automation that runs in CI.

Experience

Blockchain Security Engineer | **ADI Foundation** *June 2026 - Present*

- Conduct in-house code reviews across multiple codebases to find and remediate vulnerabilities
- Lead blockchain security audits and guide secure development practices for dApps and smart contracts
- Define application security policies, procedures, and engineering guidelines for the organisation
- Own incident response and security triage for blockchain-related events
- Integrate automated security checks into CI/CD pipelines to catch vulnerabilities before release
- Threat-model new systems and features before launch, and review backend services, APIs and infrastructure alongside smart contracts
- Use AI tooling to speed up code review and security triage

Lead Security Engineer (Blockchain) | **Reckong Tech** *Sep 2025 - May 2026*

- Conduct end-to-end security reviews for smart contracts and ZK circuits while establishing company-wide security policies.
- Develop custom tools and internal security libraries to harden the development lifecycle and mitigate vulnerabilities.
- Manage high-stakes external audits with top-tier firms, overseeing technical remediation and serving as the primary security liaison.
- Engineer competitive security solutions and present novel research at global conferences
- Threat-model new protocols and features before launch so security requirements are set early.

Security Engineer | **Matter Labs/zkSync** *March 2024 - August 2025*

- Perform Security Reviews on existing and new smart contracts and circuits.
- Research and Engineer competitive solutions/tools to improve the security landscape with testing and formal verification.
- Lead external audits and communications
- Share any new research at security conferences
- Review L1 ↔ L2 bridge and messaging contracts.
- Handle incident response and security triage, including external bug bounty reports.

Security Auditor | ConsenSys Diligence *June 2022 - Feb 2024*

- Perform Security Audits on Complex Protocols.
- Help the auditee team to adopt a better and more secure system design.
- Research and Contribute to the in-house security tools.
- Research new attack vectors, and share the knowledge with fellow auditors in the team.
- Speak at leading security conferences sharing any new research or building relations with new protocols.
- Audit bridge and ZK verifier systems, including Linea's PLONK verifier, message service and canonical token bridge.
- Build analysis tools and vulnerability detectors used in audits.
- Write threat models and design reviews for audited teams.

Blockchain Smart Contract Auditor | QuillAudits *May 2021 - June 2022*

- Conduct Smart Contract Audits: Manual Review, Functional/Automated/Fuzz Testing
- Client Interactions: Providing suggestions to resolve the issues reported during an audit
- Interviews: Take interviews for new joiners in order to bring new talent in.

Infosec Instructor | TSPL's Explorium *Jul 2018 - May 2019*

- Prepare and Deliver lectures to students on topics such as programming, networking, cyber-security, and software design.
- Plan, Evaluate, Revise curricula, course content, course materials, and method of instruction
- Collaborate with colleagues to address teaching and research issues.
- Maintain computer equipment used in instruction

Security Tooling & AI Agents

Built Warden *2026*

- Access control for AI coding agents: hooks into every Claude Code tool call (file reads, shell commands, MCP calls) and returns allow, deny or ask from deterministic Cedar policies, with session taint tracking. 28 rules, running in observe mode across daily engineering work.

Built Claude Code plugins (skills and hooks) *2026*

- A context-size guard hook, a session hand-off skill that writes project state back to versioned notes, and a cross-model review skill that prepares a sanitised brief for a second model and checks its reply.

Built Bounty Radar / CRadar *2026*

- Security lead pipeline that runs daily in GitHub Actions, collects audit and bug-bounty leads from 14 sources, scores them and drafts outreach. The bug-finding agent is designed as a triage assistant (static analysis, LLM review, drafted report) with a human submitting every finding.

Built ZK Stack Tracer *2026*

- TypeScript CLI and local web app for on-chain forensics: one transaction hash or address in, the whole L1 ↔ L2 journey out (deposits, withdrawals and claims, failed deposits, upgrades), decoded and timed, on EraVM and ZKsync OS. 73 tests, a live smoke test and CI. Demo available on request.

Built XDC Token Check *2026*

- Token security scanner that AI agents pay for per call in USDC (XDC agent-commerce competition): free core scan and directory, paid full reports and "check my trade", and monitoring. 91 tests.

Built AI Red-Team Playground *2026*

- Browser playground for learning LLM security: chains prompt-obfuscation techniques and explains how each attack works and how to defend against it.

Building DVZKV (Damn Vulnerable ZK Verifier) *2026*

- CTF platform where players break deliberately vulnerable PLONK, PLONKish and FFLONK verifiers in Foundry challenges, then prove the solve on-chain and mint a soulbound badge.

Skills

Security	Secure code review, penetration testing (web, API, backend), threat modelling, smart contract and ZK circuit auditing, fuzzing, formal verification, incident response
Languages	Python, Solidity, JavaScript / TypeScript, Rust
AI & automation	Claude Code hooks and skills, coding-agent policy (Cedar), MCP, LLM pipelines (Gemini API), GitHub Actions, Playwright

Education

Bachelors in Computer Science | Mithibai College - Mumbai University *2014 - 2017*

- CGPA: 6.7/7.0

Certifications

Certified Ethical Hacker | **EC-Council**	October 2020
Blockchain Security | **Infosec**	August 2020
Autopsy Digital Forensics | **Basis Technology**	June 2020
CCNA CyberOps | **CISCO**	March 2018
Python3 | **Sololearn**	August 2017
Network Devices | **Cybrary**	August 2017
Cross-Site Scripting | **Cybrary**	August 2017
MTA: Security Fundamentals | **Microsoft**	November 2016

Entrepreneur Journey

Created CipherShastra *2021*

- An open source platform to help everyone learn Smart Contract Security by solving CTF like challenges

Founded Unchained *2021*

- An international conference aiming to promote Blockchain Security

Founded RazzorSec *2019*

- A community aiming to bring more and more enthusiasts into the evolving world of Blockchain Security

Professional Talks

- ZK Verifiers Exposed: Lessons from Real Bugs and Fixes | ETHTaipei 2025
- Quantum Robust Ethereum: What's Next? | Web3Conf Goa 2024
- Phishing Smart Contracts for Fun & Profit | c0c0n 16
- Not So Famous Attack Vectors in the World of Smart Contract Security | ETHDubai, Nullc0n Berlin
- Detecting Price Manipulation Attacks | SANS Blockchain Security Summit 2022
- Preventing Sandwich Attacks with Recurrent and Recursive Zero Knowledge Proofs | DEFCON 29
- Post Quantum Cryptography & 5G Security | Nullc0n 2021
- Verifiable Delay Functions for Preventing DoS/DDoS Attacks on Ethereum2.0 | DEFCON 28
- Modifying Jigsaw to Evade ML Malware Classifiers | Red Team Security Summit 2020

Some Public Reports

- Linea Plonk Verifier
- Linea Message Service & ZK Rollup | Canonical Token Bridge
- Forta Delegated Staking
- Gearbox Finance V2
- YoloRekt
- Nord Advisory, Nord Finance, Nord Loan
- Pi Protocol

Currently Learning

- Rust | Intermediate
- Applied Cryptography | Beginner
